More than 32 years ago, Rachel Carson's *Silent Spring* appeared upon the scene as a landmark of

literary achievement which contributed greatly to the foundation of the modern environmental movement. Rachel Carson had designed *Silent Spring* to shock the public into action against the misuse of chemical pesticides. More than anything else, the book also served as an ecological primer, demonstrating the interrelationship of all things and the dependence of each on a healthy environment for survival. Today, *Silent Spring* is generally credited with providing impetus to the whole range of anti-pollution laws that came into force in the 1970s. It is also perceived as having played a crucial role in the eventual banning of DDT as well as in the restricted use or total phasing out of the most notorious hard pesticides identified in the book. The vigorous growth of the chemical industry geared to the production of newer and ever more powerful pesticides can be traced to the introduction of the organochlorine insecticide DDT in the 1940s. These pesticides were meant not only to control insects but also animal pests, disease and weeds. Initially their development was based on the belief that they would provide a definitive solution to pest and vector problems.

This book uses insights from the cognitive sciences to illuminate Kafka's poetics, exemplifying a paradigm for literary studies in which cognitive-scientific insights are brought to bear directly on literary texts. The volume shows that the concept of "cognitive realism" can be a critically productive framework for exploring how textual evocations of

cognition correspond to or diverge from cognitive realities, and how this may affect real readers. In particular, it argues that Kafka's evocations of visual perception (including narrative perspective) and emotion can be understood as fundamentally enactive, and that in this sense they are "cognitively realistic". These cognitively realistic qualities are likely to establish a compellingly direct connection with the reader's imagination, but because they contradict folk-psychological assumptions about how our minds work, they may also leave the reader unsettled. This is the first time a fully interdisciplinary research paradigm has been used to explore a single author's fictional works in depth, opening up avenues for future research in cognitive literary science.

According to a famous Talmudic story (Babylonian Talmud, Tractate Shabbat: 31a), a gentile once approached Rabbi Hillel and asked to be taught the entire Torah while standing on one foot. Hillel replied, 'Love your neighbour as yourself. That is the entire Torah. The rest is simply an explanation. Go and learn it!' In much the same way, Jewish law can be described in one word—Torah. All the rest is simply an explanation. The Torah, also known as the Bible, the five books of Moses, and the Pentateuch, was written over 3,000 years ago. Since then, Jewish law has developed various interpretations and applications of the Torah, interpretations of those interpretations, and so on. Jewish law contains civil dictates as well as religious protocol. Problems that arose in the framework of religious life and problems surrounding civil relationships both found solutions in the same legal source—the Torah and the Halacha, the Jewish legal interpretations and rulings. This chapter on water law in the Jewish tradition provides insight into Jewish law and custom in general, and rules related to the protection of water sources in particular. One should not look, however, to find a written code of Jewish law, as there is none. Indigenous cultures are not terra nullius — nobody's land, free to be taken. True Tracks is a groundbreaking work that paves the way for respectful and ethical engagement with Indigenous cultures. Using real-world cases and personal

complex laws and cultural protocols, providing examples for those working in many sectors to enact key principles for Indigenous engagement, including respect and self-determination.’ — Anita Heiss

Is there a theory that explains the essence of consciousness? Or is consciousness itself an illusion? Am I conscious now?

Now considered the 'last great mystery of science', consciousness was once viewed with extreme scepticism and rejected by mainstream scientists. It is now a significant area of research, albeit a contentious one, as well as a rapidly expanding area of study for students of psychology, philosophy, and neuroscience. This edition of *Consciousness*, revised by author team Susan Blackmore and Emily Troscianko, explores the key theories and evidence in consciousness studies ranging from neuroscience and psychology to quantum theories and philosophy. It examines why the term 'consciousness' has no recognised definition and provides an opportunity to delve into personal intuitions about the self, mind, and consciousness. Featuring comprehensive coverage of all core topics in the field, this edition includes: Why the problem of consciousness is so hard Neuroscience and the neural correlates of consciousness Why we might be mistaken about our own minds The apparent difference between conscious and unconscious Theories of attention, free will, and self and other The evolution of consciousness in animals and machines Altered states from meditation to drugs and dreaming Complete with key concept boxes, profiles of well-known thinkers, and questions and activities suitable for both independent study and group work, *Consciousness* provides a complete introduction to this fascinating field. *Attitudes to Translation* describes translated texts as

possessing ideological and institutional dimensions to the concept of "the other". Peter Pryce's contribution is an expository study on four attitudes that affect the art of translation. He describes translated texts as possessing ideological and institutional dimensions to the concept of the "other". Attitudes fashioned by ideologies are said to be the hidden components of the translation process. He submits that there is no clear-cut dichotomy between the different attitudes at any one time and that those labels are only coordinates to ease research into the complex jungle of human attitudes and ideologies to other languages and cultures.

Recent developments in novel materials, sensing principles and signal processing are paving the way for new types of analytical sensors, offering improved sensing performance and practicality. Such advancements will provide accurate and real-time analytical information in the environmental, food, and healthcare sectors to better guide decision-making. For sensors to be commercially viable, the miniaturisation and integration of components for rapid, automated, in-field detection and diagnosis need to be considered. This book highlights state-of-the-art sensors technology in Australia through original contributions and reviews.

The introduction of multidetector spiral CT into clinical practice is without any doubt one of the most important technical developments in the field of computed tomography in general, and spiral CT in particular, in recent years. Indeed, multislice CT technology, based on the spiral CT technique

invented by W. Kalender almost 20 years ago, has opened immense and totally new perspectives for better utilisation of contrast medium during the examination, for optimal multiplanar reconstruction and for increased patient throughput. The potential applications, more specifically in the area of CT angiography of the brain and the heart and vessels, are most interesting and definitely contribute to better patient care as well as to more efficient utilisation of equipment. These exciting new clinical applications explain the keen desire of radiologists and other clinicians to hear and learn more about the first results obtained with this new equipment in daily clinical practice. This book will satisfy their needs. Professor Maximilian F. Reiser was among the first to install multidetector CT in his department in Munich and to gain experience with this new radiological tool. He was also able to organise a very successful and well attended international meeting on this hot topic as early as z 2000 in Starnberg, Germany.

This monograph articulates eight key elements of a family-centered approach to policy and practice for children needing specialized health and developmental services. An introductory section reviews the development of the first edition of the monograph in 1987 and its widespread dissemination and acceptance since that time. Each of the following eight chapters then addresses one of the following elements: (1) recognition that the family is the constant in the child's life, while the service systems and support personnel within those systems fluctuate; (2) facilitation of family/professional collaboration at all levels of hospital, home, and

community care; (3) exchange of complete and unbiased information between families and professionals in a supportive manner; (4) respect for cultural diversity within and across all families including ethnic, racial, spiritual, social, economic, educational, and geographic diversity; (5) recognition of different methods of coping and promotion of programs providing developmental, educational, emotional, environmental, and financial supports to families; (6) encouragement of family-to-family support and networking; (7) provision of hospital, home, and community service and support systems that are flexible, accessible, and comprehensive in meeting family-identified needs; and (8) appreciation of families as families, recognizing their wide range of strengths, concerns, emotions, and aspirations beyond their need for specialized health and developmental services and support. Checklists for evaluating these elements are attached. (Contains 160 references.) (DB)

The environment is prone to suffer pollution and

toxic insult from generations of nanomaterials as well from accidental releases during production, transportation, and disposal operations. The NMs could interact with and cause adverse biological effects at cellular, subcellular, and molecular levels. Assessing potential environmental/ecological risks requires quality information on transport and fate of nanoparticles in the environment, exposures and vulnerabilities of organisms to the nanomaterials and standard methods for assessing toxicity for aquatic or terrestrial organisms and human health. The systematic risk characterization and evaluation of the safety of nanomaterials require a multidisciplinary approach and convergence of knowledge and efforts from researchers and experts from toxicology, biotechnology, materials science, chemistry, physics, engineering, and other branches of life sciences. Although studies are beginning to appear in the literature addressing the toxicity of various nanomaterials and their potential for exposure, at this stage definitive statements regarding the impacts of nanomaterials on human health and the environment remain sketchy requiring an increased level of precautions with regard to nanomaterials, as has happened with other emerging contaminants and technologies (e.g., biotechnology). The need for an increased level of understanding the perception of risk and of benefits will vary and is likely to influence public, regulatory, and non-governmental

activities regarding risk and benefit evaluations. Systematic identification and assessment of the risks posed by any new technology are essential. A prudent, integrated, and holistic approach is required to develop best practices based on the scientific understanding about what we know and what we don't know but need to know. Nanomaterials addresses key issues of ecotoxicological actions and effects of nanomaterials on life and environment, their threats, vulnerability, risks, and public perception. The readers learn to read bad news objectively and think about and search for ecological 'green' solutions to current environmental and ecological problems with blue, grey, brown, and red shades for building a sustainable ecosystem. It shows how this molecular terrain is a common ground for interdisciplinary research and education that will be an essential component of science, engineering and technology in the future. The book is divided into three sections. Section 1 includes general topics related to ecotoxicity of nanomaterials to microbes, plants, human and environment. Section 2 incorporates risks generated by the use of nanomaterials. Section 3 discuss safety issues and the public.

Sufism is often regarded as standing mystically aloof from its wider cultural settings. By turning this perspective on its head, Indian Sufism since the Seventeenth Century reveals the politics and poetry of Indian Sufism through the study of Islamic sainthood in the midst of a cosmopolitan Indian society comprising migrants, soldiers, litterateurs and princes. Placing the mystical traditions of Indian Islam within their cultural contexts, this interesting study focuses on the shrines of four Sufi saints in the neglected Deccan region and their changing roles under the rule of the Mughals, the Nizams of Haydarabad and, after 1948, the Indian nation. In particular Green studies the city of Awrangabad, examining the vibrant intellectual and cultural history of this city as part of the independent state of Haydarabad. He employs a combination of historical texts and anthropological fieldwork, which provide a fresh perspective on developments of devotional Islam in South Asia over the past three centuries, giving a fuller understanding of Sufism and Muslim saints in South Asia.

The past twenty years have seen great theoretical and empirical advances in the field of corporate finance. Whereas once the subject addressed mainly

the financing of corporations--equity, debt, and valuation--today it also embraces crucial issues of governance, liquidity, risk management, relationships between banks and corporations, and the macroeconomic impact of corporations. However, this progress has left in its wake a jumbled array of concepts and models that students are often hard put to make sense of. Here, one of the world's leading economists offers a lucid, unified, and comprehensive introduction to modern corporate finance theory. Jean Tirole builds his landmark book around a single model, using an incentive or contract theory approach. Filling a major gap in the field, *The Theory of Corporate Finance* is an indispensable resource for graduate and advanced undergraduate students as well as researchers of corporate finance, industrial organization, political economy, development, and macroeconomics. Tirole conveys the organizing principles that structure the analysis of today's key management and public policy issues, such as the reform of corporate governance and auditing; the role of private equity, financial markets, and takeovers; the efficient determination of leverage, dividends, liquidity, and risk management; and the design of managerial incentive packages. He weaves empirical studies into the book's theoretical analysis. And he places the corporation in its broader environment, both microeconomic and macroeconomic, and examines the two-way

interaction between the corporate environment and institutions. Setting a new milestone in the field, *The Theory of Corporate Finance* will be the authoritative text for years to come.

**bookdown: Authoring Books and Technical Documents with R Markdown** presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL,

Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
