Much attention in late-developing countries is given to providing access to studies which allow school leavers to enter science and technology-related careers. This book reviews research related to the crucial dimension of epistemological access to the disciplines of import, which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as research methods, access, curriculum, instruction and assessment, and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. It is the outcome of a doctoral research capacity-development project, the Graduate Studies in Science, Mathematics and Technology Education (GRASSMATE).

An examination of how language functions in CLIL, based on a corpus of classroom interactions. Drawing on their wide experience as CLIL educators and researchers, the authors explore data collected in real CLIL classrooms from two interrelated perspectives: the CLIL classroom as an interactional context for developing language and content, and the genres and registers through which the meanings of the different academic subjects are enacted. From the analysis of this corpus of data, the authors provide a rich description of how CLIL students' language works and may be expected to develop. Also available separately as a paperback.

This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions

around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: (a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to peoples' views about evolution, (b) designing, implementing, evaluating evolution education curriculum that reflects contemporary evolution understanding, and (c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.
