The DSLR cinema revolution began over ten years ago. Professional filmmakers, students, video journalists, event video shooters, production houses, and others jumped at the opportunity to shoot cinematic images on these low budget cameras. The first edition of the book mapped the way focusing exclusively on DSLRs. This new edition shows how you can create stunning cinematic images using low budget cinema cameras, from iPhones to the C200. The author examines new cameras and new projects as filmmakers shoot action movies with the Panasonic GH5, craft personal stories with Blackmagic's Pocket Cinema Camera, make documentaries and short films with the Canon C100 Mark II, and create music videos with the 5D Mark IV. This book, like the previous edition, takes the wisdom of some of the best shooters and empowers you to create visually stunning images with low budget cinema cameras. It includes six all new case studies, as well as updated examples from short films and documentaries. This book contains the essential tools to make you a better visual storyteller.

If you've invested in a camera as sophisticated as the Canon EOS 7D II, you're looking for more than good pictures -- you demand outstanding photos. After all, the 7D II is the most advanced APS-C format camera that Canon has ever introduced. It boasts 20 megapixels of resolution, blazing-fast automatic focus, and cool features like full high-definition movie shooting. But your gateway to pixel proficiency is dragged down by the slim little book included in the box as a manual. You know everything you need to know is in there, somewhere, but you don't know where to start. In addition, the camera manual doesn't offer much information on photography or digital photography. Nor are you interested in spending hours or days studying a comprehensive book on digital SLR still photography that doesn't necessarily apply directly to your 7D II. What you need is a guide that explains the purpose and function of the 7D II's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, exposure, and special autofocus modes available, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred great pictures with your new camera. Why isn't there a

book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? Now there is such a book. If you want a quick introduction to the 7D II's focus controls, wireless flash synchronization options, how to choose lenses, or which exposure modes are best, this book is for you. If you can't decide on what basic settings to use with your camera because you can't figure out how changing ISO or white balance or focus defaults will affect your pictures, you need this guide.

The Canon EOS 7D Mark II is an update to the classic 7D model, widely regarded as an excellent APS-C sensor DSLR, aimed at the serious enthusiast. The new model boasts faster burst shooting, improved autofocus and a much broader ISO range, contained in one of its best-built camera bodies. For stills photographers, the Mark II offers an all cross-type, 65-point AF module that works in conjunction with a 150,000-pixel RGB + IR metering sensor, offering the latest version of the 'Intelligent Tracking and Recognition' (iTR) focus system featured in the EOS-1D X. With iTR engaged and an initial focus point selected, focus can be initiated with a half-depress of the shutter-release button, leaving the camera to track the subject as it moves across the frame. The camera's continuous shooting rate is 10 frames per second, previously limited to pro-grade sports cameras. The shutter is rated to more than 200,000 cycles. The main image sensor is a variant of the Dual Pixel AF design first seen in the Canon EOS 70D, offering 20MP output. Using its image sensor, the camera can capture information about subject position and depth whenever its mirror is raised. This potentially gives more decisive autofocus and subject tracking in 'Live View' and while shooting video. The Mark II's movie capabilities have been improved, offering 1080p/60 shooting capability and a choice of MOV or MP4 format, plus three compression options (IPB-Lite, IPB and All-I). AUTHOR: David Taylor is an award-winning landscape and travel photographer, born and raised in Newcastle upon Tyne, Tyne and Wear. His work has taken him all over the world, but away from his photographic career David lives on an exposed hill, overlooking the market town of Hexham in Northumberland.
