

## Chapter 2 Evaluating Nutrition Information

The stories in this book are diverse, spanning five decades and playing out in different arenas, from local to global. They take place in developing countries all over the world, and they involve many sectors and disciplines beyond nutrition itself, including health, agriculture, education, social protection, and water and sanitation. Most importantly, they paint a nuanced picture of success as a context-specific achievement that may, or may not, endure into the future.

Nutrition in Public Health, Third Edition defines the state of public health nutrition and the services offered in the United States today. It provides readers with a description of public health in the U.S. through data and expertise from relevant contributing authors, and discusses the active services and service agencies that are available to manage today's health issues. New to the Third Edition: Nutritional epidemiology chapter; Environmental and economic concerns of today; Food security in global terms; World hunger and the implications to public health nutrition; and public health nutrition and fitness programs and services in America"

During the past decade, tremendous growth has occurred in the use of nutrition symbols and rating systems designed to summarize key nutritional aspects and characteristics of food products. These symbols and the systems that underlie them have become known as front-of-package (FOP) nutrition rating systems and symbols, even though the symbols themselves can be found anywhere on the front of a food package or on a retail shelf tag. Though not regulated and inconsistent in format, content, and criteria, FOP systems and symbols have the potential to provide useful guidance to consumers as well as maximize effectiveness. As a result, Congress directed the Centers for Disease Control and Prevention (CDC) to undertake a study with the Institute of Medicine (IOM) to examine and provide recommendations regarding FOP nutrition rating systems and symbols. The study was completed in two phases. Phase I focused primarily on the nutrition criteria underlying FOP systems. Phase II builds on the results of Phase I while focusing on aspects related to consumer understanding and behavior related to the development of a standardized FOP system. Front-of-Package Nutrition Rating Systems and Symbols focuses on Phase II of the study. The report addresses the potential benefits of a single, standardized front-label food guidance system regulated by the Food and Drug Administration, assesses which icons are most effective with consumer audiences, and considers the systems/icons that best promote health and how to maximize their use.

Extract: The rapid increase in United States health care costs and the increasing interest in improving the nutritional status of Americans has made a viable nutrition intelligence system necessary. This study includes an overview of current U.S. programs which provide such information as the nutritional status of target groups or geographic areas, the effectiveness of nutrition intervention programs, and future areas of nutritional concern. Collectively, this is nutrition intelligence. GAO in earlier testimony to the Congress and reports to the Departments of Agriculture and Health, Education and Welfare commented on weaknesses in the current system, evaluated a joint USDA/HEW proposal to correct those weaknesses, and made certain recommendations to the Congress and the agencies concerning the joint proposal. This study will provide the reader with an understanding of what nutrition intelligence is, what is being done, and a view of what future developments are likely.

Handbook of Pediatric Nutrition, Third Edition, provides cutting edge research and resources on the most important pediatric issues and therapies, such as prenatal nutrition, weight management, vegetarian diets, diabetes guidelines, and transplant nutrition concerns. Commonly used by dietetic practitioners studying for their Pediatric Specialty exams, registered dietitians, dietetic technicians, nutritionists, pediatricians, nurses, and dietetic students, this book is considered the last word in pediatric nutrition.

Rev. ed. of: Discovering nutrition / Paul Insel, R. Elaine Turner, Don Ross. 3rd ed. c2010.

Obesity poses one of the greatest public health challenges of the 21st century, creating serious health, economic, and social consequences for individuals and society. Despite acceleration in efforts to characterize, comprehend, and act on this problem, including implementation of preventive interventions, further understanding is needed on the progress and effectiveness of these interventions. Evaluating Obesity Prevention Efforts develops a concise and actionable plan for measuring the nation's progress in obesity prevention efforts--specifically, the success of policy and environmental strategies recommended in the 2012 IOM report Accelerating Progress in Obesity Prevention: Solving the Weight of the Nation. This book offers a framework that will provide guidance for systematic and routine planning, implementation, and evaluation of the advancement of obesity prevention efforts.

This framework is for specific use with the goals and strategies from the 2012 report and can be used to assess the progress made in every community and throughout the country, with the ultimate goal of reducing the obesity epidemic. It offers potentially valuable guidance in improving the quality and effect of the actions being implemented. The recommendations of Evaluating Obesity Prevention Efforts focus on efforts to increase the likelihood that actions taken to prevent obesity will be evaluated, that their progress in accelerating the prevention of obesity will be monitored, and that the most promising practices will be widely disseminated.

Written for majors and advanced non-majors, the Sixth Edition of Nutrition provides a modern, comprehensive introduction to nutrition concepts, guidelines, and functions. Its student-focused approach provides readers with the knowledge they need to make informed decisions about their overall nutrition.

Started in 1974, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) was designed to meet the special nutritional needs of low-income pregnant, breastfeeding, or postpartum women; infants; and children up to 5 years of age who have at least one nutritional risk factor. The WIC Program provides three main benefits: supplemental foods, nutrition education, and referrals to health and social services. Since the inception of the WIC program, substantial changes in size and demographics of the population, food supply and dietary patterns, and health concerns have made it necessary to review the WIC food packages. Proposed Criteria for Selecting the WIC Food Packages proposes priority nutrients and general nutrition recommendations for the WIC program, and recommends specific changes to the WIC packages.
