This book provides the first evidence-based reference about inclusive education in Kazakhstan, one of the post-Soviet Union countries. This nation, as well as many other central Asian countries, is undergoing a radical transformation and change in education which encompasses the implementation of inclusive and special education. This book is composed of chapters synthesized from various studies and captures different aspects of the implementation of inclusive education in Kazakhstan. The implementations of inclusive education in any educational system require a multi-dimensional, multi-level and an integrated approach. It requires collaborative efforts on part of all stakeholders including governance, pedagogical, auxiliary and support structures. This book is a collection of evidence-based studies in a Kazakhstani educational context that demonstrates the multifaceted nature of the process to realize an educational system that is inclusive. The book highlights some of the fundamental requirements and challenges for this process to succeed. Among the main issues addressed in this book are the understanding of inclusive education, the transition towards inclusive education given the soviet legacy, the role of school leadership, teachers, parents and other stakeholders in the process. The findings in each chapter demonstrate some of the milestones and challenges of inclusivity. This work will be of interest to academics, scholars, students and teachers in this field.

In many schools and higher education institutions it has become common practice to share assessment criteria with students. Sometimes it is required for accountability purposes, at other times criteria are used as a means to communicate expectations to students. However, the idea that explicit assessment criteria should be shared with students has been contested. On the one hand, research has shown that explicit criteria may positively affect student performance, reduce their anxiety, as well as support students' use of self-regulated learning strategies. On the other hand, there are fears that explicit criteria may have a restraining influence on students' learning, as well as limiting their autonomy and creativity. There are also indications of students becoming more performance oriented, as opposed to learning oriented, when being provided with explicit assessment criteria. Taken together, it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria, and under which circumstances it is not. In particular, empirical research on the proposed negative effects of sharing criteria with learners is limited and most fears voiced in the literature are based on individual experiences and anecdotal evidence. In this book, we therefore bring different perspectives on transparency in assessment together, in order to further our understanding of how students are influenced by the use of explicit assessment criteria. A deeper understanding of the influence of explicit assessment criteria on students' understanding of criteria, motivation, and learning is equally imperative for future research and educational practice, both of which need to go beyond individual opinions and convictions.
