One of the main problems of satellite radio was addressed by the main satellite radio broadcasters. Since you need to be in the line of sight of the satellite to receive the transmission, different problems appeared with mobile satellite radio receivers, especially when different landscaping objects blocked the direct transmission. To solve this, land based devices were installed in order to eliminate the lack of direct satellite transmission. Another interesting aspect related to satellite radios is that they approached their service offers from a different perspective than traditional radio broadcasters. Instead of airing commercials they charge a subscription fee. For many people, this is actually the best alternative, since they get an almost 100% content broadcast (whether it's music or talk shows) without the 10-12 minutes per hour of annoying commercials. While Elwood Haynes and the Apperson brothers are not as well known as Henry Ford, Ransom Olds and other famous automobile manufacturers, their contributions to the automotive industry are just as significant. They were responsible for one of the first functioning automobiles, if not the first, in the United States. After building their automobile in 1894, the three men formed the Haynes-Apperson Automobile Company in Kokomo, Indiana, one of the first car manufacturing companies in the country. Three years after incorporation, a dispute over money caused the partnership to split up and Edgar and Elmer Apperson formed their own company. Both companies lasted until the mid-1920s. This book is a history of these automotive pioneers and their companies: the Haynes-Apperson Automobile Company, the Haynes Automobile Company, and the Apperson Brothers Automobile Company. It is richly illustrated with photographs of the factories, automobiles, personalities and advertisements.
