The Prison system is widely believed to be an immutable element of contemporary society. Many criminologists and sociologists of deviance believe that decarceration movements have failed to yield progressive reform, and that feasible alternatives to the prison system do not exist. Maeve McMahon challenges these views. Reconstructing the emergence of critical perspectives on decarceration, she examines analytical and empirical problems in the research. She also points out how indicators of community programs and other penalties serving as alternatives to prison have typically been overshadowed through critical focus on their effects in 'widening the net' of control. McMahon presents a detailed analysis of decreasing imprisonment, and of the part played by alternatives in this, during the postwar period in Ontario. Drawing from extensive documentary research, and from interviews with former correctional officials, she charts the changing climates of opinions, and socio-economic factors, which facilitated decarceration. By situating her analysis in the context of theoretical and political arguments about the possibility of decarceration, McMahon provides in her work a stimulus to the development of progressive penal politics not just in Canada, but in all western countries.

A comprehensive, annotated listing of over a thousand books, monographs, and articles containing substantive information on all the American Indian languages of California and closely related languages outside its boundaries. Important book reviews are included, as are unpublished theses and dissertations. The main listing is by author, with cross-references for co-author. A single index, which refers back to the main listing by item numbers, lists general works; names of dialects, languages, and language families; and miscellaneous topics.

America (Amerika en aleman original, tambien conocida como The Stoker, El fogonero, o El desaparecido) es una novela del escritor Franz Kafka, iniciada en 1911 que dejo inconclusa en 1912 y publicada postumamente en 1927. Desde 1982 se publica con el titulo original que Kafka penso: "El desaparecido." Fue Max Brod quien cambio dicho titulo por el de "America." Esta revision y los estudios posteriores, determinaron una nueva distribucion de la novela, sobre todo de los fragmentos, tal y como se decidio publicar en la edicion alemana definitiva de Fischer. La historia describe el ir y venir de un muchacho de 16 anos, inmigrante de Europa, llamado Karl Rossman, en los Estados Unidos, quien fue forzado a ir a Nueva York por sus padres porque habia sido seducido por la criada que despues tuvo un hijo suyo. Durante el viaje se hace amigo de un fogonero del barco.

Drawing primarily from US State Department archives and the four volumes of the official British history of World War I in Mesopotamia (published during 1923-1927), Majd reconstructs the political and military history of Iraq in World War I, a period that began with fierce Iraqi resistance against the British and ended with the consolidation of British control under the mandate system. In addition to documenting the military ebb and flow of Britain's colonial project in Iraq, Majd also presents two chapters considering the aftermath of the war in terms of Iraq's commercial decline and the impact of disease.

As more companies shift their operations between countries to take advantage of lower costs and greater profit, the global market continues to change rapidly, resulting in global hypercompetition that can be detrimental to a business. Firms must remain updated with the latest research as they navigate cultural differences, communication challenges, and inconsistent standards in order to thrive. Advanced Perspectives on Global Industry Transitions and Business Opportunities is an essential, comprehensive reference book that explores the current global business environment and the challenges that have arisen due to contemporary globalization and the resulting global hypercompetition. With a broad scope, the book covers the implications of industry transitions from small and medium-sized companies to multinational businesses and large enterprises and discusses opportunities for both born global and born-again global firms. Featuring topics that deal with innovation, digitalization, disruptive technologies, and international collaboration, this is an ideal source for executives, managers, entrepreneurs, global businesses and businesses looking to transition to the global market, academicians, researchers, and students.

This information-packed guide describes patterns of village life, and covers such subjects as Indian tools and artifacts, hunting techniques, and food.

One of the most adventurous American artists working today, Dennis Oppenheim has centered his artistic investigations on the dialogue between art and the self. An active innovator since the sixties, Oppenheim has pioneered both body art and so-called land art. Most famous for his whimsical, large-scale installation pieces, Oppenheim has worked with a variety of mediums: from performance and video art, to three dimensional moving machine pieces, and sculptural works employing unorthodox materials. This book is a comprehensive compendium of Oppenheim's art, his most complete monograph to date, and includes an interview with the artist. From a giant metallic upside-down church, to a group of human-sized hot dogs in sleeping bags gathered around a campfire, Oppenheim's work is alternately strange, humorous, and fascinating.

"Not long ago the respectable Tate Gallery in London came under heavy public attack for purchasing a sculpture by the young American Carl Andre, because it seemed to be no more than a double layer of old bricks. Critics defended the work, but the public continued to believe that it was a "put-on" and failed to accept it as art. In doing so, they were enacting a familiar drama of modern art, whereby something that is difficult to grasp is thought of as fraudulent. For this public, Rodin's sculpture would constitute a standard of clarity and accessibility, while the other works of artists such as Andre, Robert Smithson, and Michael Heizer are rejected as meaningless. But it can be argued that Rodin's work itself defined by the same attitudes toward the body and its movement that were proposed a century later by these young artists. In this brilliant study of modern sculpture from Rodin to the present, Rosalind Krauss examines major works in the light of different approaches to general sculptural issues in order to illuminate the connections between them. By focusing clearly on such different examples as

Brancusi's Bird in Space, Picasso's Construction in Metal Wire, David Smith's Tanktotem I, and Robert Morris's Columns, the author allows us to observe and understand the logical progression from the figurative works of the nineteenth century to the range of abstract styles of the 1970s. The book is illustrated with many fine photographs of the works discussed, several made especially for this book. Since one of the most difficult problems involved in a sensible and clear analysis of sculpture is the photographing of works themselves, this book is a valuable contribution to the literature on visual grounds as well as on critical and historical levels." -- Publisher's description

The "Metal Forming Handbook" presents the fundamentals of metal forming processes and press design. As a textbook and reference work in one, it provides an in-depth study of the major metal forming technologies: sheet metal forming, cutting, hydroforming and solid forming. Written by qualified, practically oriented experts for practical implementation, supplemented by sample calculations and illustrated all through by clearly presented color figures and diagrams, this book supplies fundamental information and solutions on the latest metal forming technology.

This book introduces multiple criteria and multiple constraint levels linear programming (MC2LP), which is an extension of linear programming (LP) and multiple criteria linear programming (MCLP). In the last decade, the author and a group of researchers from the USA, China, Korea, Germany, and Hungary have been working on the theory and applications of MC2LP problems. This volume integrates their main research results ranging from theoretical bases to broad areas of real world applications. The theoretical bases include the formulation of MC2LP; integer MC2LP and MC2 transportation model; fuzzy MC2LP and fuzzy duality of MC2LP; optimal system designs and contingency plans; MC2 decision

support system; and MC2 computer software development. The application areas are accounting, management information systems, production planning, and telecommunications management. The book serves as a seminar text for both undergraduates and graduates who have a linear algebra or equivalent background. For practitioners, it will help in handling LP type problems in multiple decision making environment.

This text is designed as a briefer, less technical introduction to operations management than the more traditional principles of operations management texts. Available in two versions, the hardcover version includes the Quantitative tutorials and the softcover version does not. Most mathematical techniques are covered in the chapter supplements which are found in both versions.
