FOR B.Sc & B.Sc.(Hons) CLASSES OF ALL INDIAN UNIVERSITIES AND ALSO AS PER UGC MODEL CURRICULUM Contents:

CONTENTS:Protochordates:Hemichordata 1.Urochordata Cephalochordata Vertebrates : Cyclostomata 3. Agnatha, Pisces Amphibia 4. Reptilia 5. Aves Mammalia 7 Comparative Anatomy:Integumentary System 8 Skeletal System Coelom and Digestive System 10 Respiratory System 11. Circulatory System Nervous System 13. Receptor Organs 14 Endocrine System 15 Urinogenital System 16 Embryology Some Comparative Charts of Protochordates 17 Some Comparative Charts of Vertebrate Animal Types 18 Index.

The world population is expected to increase exponentially within the next decade, which means that the food demand will increase and so will waste production. There is a need for effective food waste management as wasted food leads to overutilization of water and fossil fuels and increasing greenhouse gas emissions from the degradation of food.

Global Initiatives for Waste Reduction and Cutting Food Loss explores methods for reducing waste and cutting food loss in order to help the environment and support local communities, as well as solve issues including that of land space. Covering topics that include food degradation, enzymes, and microorganisms, this publication is designed for policymakers, environmentalists, engineers, government officials, researchers, scientists, academicians, and students.

Prepared by a pioneering British geologist and first published in 1888, this reference work was the first of its kind.

With appendices.

Product information not available.

The present volume contains an editorial review

article New vistas in Ethnobotany along with 76 other articles written by eminent ethno-botanist working in various scientific research and academic institutions in South Asia. Ethnobotany of tribals/traditional uses of plants in different parts of South Asia and ethnobotanical uses of Herbarium have been dealt with in this work besides many other useful articles. This work provides a glimpse of rich ethnobotanical heritage of South Asia.

The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it, and those on the history of science almost always start with the Greeks, with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures, but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology, and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science, and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort, and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today.

There is nothing that crosses disciplinary and geographic boundaries, dealing with both scientific and philosophical issues, to the extent that this work does. xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa. "India retains one of the richest painting traditions in the history of global visual culture, one that both parallels aspects of European traditions and also diverges from it. While European artists venerated the landscape and landscape paintings, it is rare in the Indian tradition to find depictions of landscapes for their sheer beauty and mood, without religious or courtly significance. There is one glorious exception: Painters from the city of Udaipur in Northwestern India specialized in depicting places, including the courtly worlds and cities of rajas, sacred landscapes of many gods, and bazaars bustling with merchants, pilgrims, and craftsmen. Their court paintings and painted invitation scrolls displayed rich geographic information, notions of territory, and the bhava, or feel, emotion, and mood of a place. This is the first book to use artistic representations of place to trace the major aesthetic, intellectual, and political shifts in South Asia over the long eighteenth century. While James Tod, the first British colonial agent based in Udaipur, established the region's reputation as a principality in a state of political and cultural deterioration, author Dipti Khara uses these paintings to suggest a counter-narrative of a prosperous region with beautiful and bountiful cities, and plentiful rains and lakes. She explores the perspectives of courtly communities, merchants, pilgrims, monks, laypeople, and officers, and the British East India

Company's officers, explorers, and artists. Throughout, she draws new conclusions about the region's intellectual and artistic practices, and its shifts in political authority, mobility, and urbanity"--

Over the years, the scope of our scientific understanding and technical skills in ecology and environmental science have widened significantly, with increasingly greater emphasis on societal issues. In this book, an attempt has been made to give basic concepts of ecology, environmental science and various aspects of natural resource conservation. The topics covered primarily deal with environmental factors affecting organisms, adaptations, biogeography, ecology of species populations and species interactions, biotic communities and ecosystems, environmental pollution, stresses caused by toxics, global environmental change, exotic species invasion, conservation of biodiversity, ecological restoration, impact assessment, application of remote sensing and geographical information system for analysis and management of natural resources, and approaches of ecological economics. The main issues have been discussed within the framework of sustainability, considering humans as part of ecosystems, and recognising that sustainable development requires integration of ecology with social sciences for policy formulation and implementation. Interest in Financial Services Marketing has grown hugely over the last few decades, particularly since the financial crisis, which scarred the industry and its relationship with customers. It reflects the importance of the financial services industry to the

economies of every nation and the realisation that the consumption and marketing of financial services differs from that of tangible goods and indeed many other intangible services. This book is therefore a timely and much needed comprehensive compendium that reflects the development and maturation of the research domain, and pulls together, in a single volume, the current state of thinking and debate. The events associated with the financial crisis have highlighted that there is a need for banks and other financial institutions to understand how to rebuild trust and confidence, improve relationships and derive value from the marketing process. Edited by an international team of experts, this book will provide the latest thinking on how to manage such challenges and will be vital reading for students and lecturers in financial services marketing, policy makers and practitioners. Studies on the Himalayan region covering Kashmir, Himachal Pradesh, and Uttar Pradesh. Covers the period from 1790 to 1905 in The Times of London.
