Your guide to building and programming your very own advanced robot using LEGO MINDSTORMS EV3 Learn something new in an Instant! A short, fast, focused guide delivering immediate results Step-by-step instructions that will help you to build and program your own robot Utilize all the sensors in the EV3 kit Write programs with

all of the essential programming commands In Detail LEGO MINDSTORMS is more than just a toy. With a multitude of gears, pins, and beams, you can build fantastic, complex designs. The programming brick is Linux-based, and with dozens of available sensors, it allows you to make incredibly sophisticated robots. Instant LEGO MINDSTORMS EV3 goes beyond the example projects that come with the box and helps you to produce a more advanced and functional robot. "Instant LEGO MINDSTORMS EV3" is a practical guide that shows you how to advance from the basic lessons included in your EV3 kit, combine core programming commands, and implement tested design principles when building your robot. You will build a basic robot and download a program to make the robot move. You will also write several increasingly complex programs to add functionality to the robot and use a proportional algorithm to track a line with an optical sensor. "Instant LEGO MINDSTORMS EV3" will teach you how to make a LEGO MINDSTORMS EV3 robot that can navigate and interact with its environment using sensors. You will first be guided through how to make your robot interact with its environment using touch sensors. You will then program the robot to navigate and change direction using a gyro sensor. Next, using a proportional algorithm, your robot will maintain a given distance to a stationary or moving object. You will then be shown how to change parameters using on-board buttons and finally how to use an optical sensor to track a line. "Instant LEGO MINDSTORMS EV3" is full of step-by-step instructions and illustrations designed to help you build a

Předkládaná publikace je určena vyučujícím obecných technických předmětů na ZŠ a zájemcům o problematiku edukační robotiky a konstrukčních stavebnic řady Lego technic. V nezbytné míře se autoři v textu věnují problematice hardware a software konstrukční stavebnice Lego Mindstorms Education NXT a následně předkládají několik ucelených úloh obsahujících jak část zaměřenou na stavbu robota, tak část věnovanou návrhu algoritmu a sestavení řídicího programu robota. This publication is intended for teachers of general technical subjects at elementary schools and for those interested in the problems of educational robotics and Lego technic construction kits. The authors are dealing with essential information concerning hardware and software of the Lego Mindstorms Education NXT construction kit and then they are presenting several tasks including both the part focused on construction of the robot as well as suggestions concerning algorithm and putting together the control programme for the robot.

Patterns can be any number of items that occur repeatedly, whether in the behaviour of animals, humans, traffic, or even in the appearance of a design. As technologies continue to advance, recognizing, mimicking, and responding to all types of patterns becomes more precise. Pattern Recognition and Classification in Time Series Data focuses on intelligent methods and techniques for recognizing and storing dynamic patterns.

Emphasizing topics related to artificial intelligence, pattern management, and algorithm development, in addition to practical examples and applications, this publication is an essential reference source for graduate students, researchers, and professionals in a variety of computer-related disciplines.
