

Mystery Of The Mind A Critical Study Of Consciousness And The Human Brain Princeton Legacy Library

The eccentric Olive Kettering swore someone was trying to harm her. Too bad no one listened, though plenty wanted her dead. When Olive is shot and killed, Mrs. Jeffries has no problem speaking her mind to see justice served.

After a brutal mugging in Manhattan leaves him with a broken arm and fractured skull, insurance investigator Jeff Resnick reluctantly agrees to recover at the home of his estranged half brother, Richard. At first, Jeff believes his graphic nightmares of a slaughtered buck are just the workings of his traumatized mind. But when a local banker is found in the same condition, Jeff believes the attack has left him with a sixth sense--an ability to witness murder before it happens. Piecing together clues he saw in his visions, Jeff attempts to solve the crime. His brother Richard is skeptical, but unsettling developments begin to forge a tentative bond. Soon, things that couldn't be explained by premonition come to light, and Jeff finds himself probing into dangerous secrets that touch his own traumatic past in wintry Buffalo--and the killer is ready to eliminate Jeff's visions permanently.

"The story began with ex FBI agent Oscar O'Neil (and his dog Peanut/Bear) from the Baker Street Mysteries. This series is written from the point of view of his granddaughter! Will she learn the secrets of why her grandfather is estranged? Meet Stella O'Neil. She's got a lot on her plate, trying to figure out her crazy, stubborn family and starting out as a realtor. Throw in a dead body found in what used to be the town's "royalty" family's manor, and she's neck deep in a mystery. She may be sweet, but she's pretty stubborn herself. As Stella's curiosity leads her from one town resident to the next, a dramatic tale of family secrets starts to appear, but is she getting too close to the truth? A scary car chase in the dark has her nerves on edge, but she won't give up until she finds out who the skeleton once was. She's so close...but someone... maybe more than one person...will do anything to stop her" - back cover

Presenting a look at the human mind's capacity while criticizing artificial intelligence, the author makes suggestions about classical and quantum physics and the role of microtubules

The second book to feature Scotland Yard investigator Adam Dalgliesh, *A Mind To Murder* is a "superbly satisfying mystery" (Chicago Daily News) from bestselling author P.D. James. On the surface, the Steen Psychiatric Clinic is one of the most reputable institutions in London. But when the administrative head is found dead with a chisel in her heart, that distinguished facade begins to crumble as the truth emerges. Superintendent Adam Dalgliesh of Scotland Yard is called in to investigate and quickly finds himself caught in a whirlwind of psychiatry, drugs, and deceit. Now he must analyze the deep-seated anxieties and thwarted desires of patients and staff alike to determine which of their unresolved conflicts has resulted in murder and stop a cunning killer before the next blow.

From the author of *Bruja Brouhaha* and *Who Do, Voodoo?*--the new *Mind for Murder Mystery!* When her ex-husband encounters a mysterious death omen, psychologist Liz Cooper turns to occult professor Nick Garfield for help in solving an all-too-real murder... At a Dodgers game to celebrate her father's birthday, Liz is forced to watch her ex--star player, Jarret--on the pitcher's mound. To make matters worse, her former best friend, Laycee, is in the stands as well. Having betrayed her trust by having an affair with Jarret, Laycee is the last person Liz wants to see. But when the appearance of a white pigeon--an omen of death--sets the superstitious Jarret off balance, it's a game changer both on and off the field. Because the next morning, Laycee is found dead in Jarret's home--and Liz is on deck as the prime suspect...

Do you want to know how to unlock the secrets of women's mind? Do you want to master the body language to look more attractive and date the women you have always dreamt about? Then this book is for you! Having a beautiful woman in your life is a must every man should aspire to, but unfortunately, it is not always so easy. Nowadays women are more and more demanding, that is why you need to understand their psychology and what they like to see in a man. You do not need a bunch of techniques nor mind games to achieve the success with women, but there are just few main basic concepts you absolutely have to master. Below the main topics this book covers and what you will learn: - The secrets you need to know to understand women and their psychology; - Why the most common dating advices you hear is wrong and what women really respond to; - The conversational strategies that will help you catch women's attention and hot to master all the steps to invite here out; - The body language dynamics you have to master to look more attractive and turn women on; - The most common mistakes men make on the first date and how to avoid them. Other reason why you should buy this book? Because it offers tips and strategies that you will not find in any other book at this price. With such small investment you will know how to successfully pickup women in any kind of contexts. The choice is yours! So what are you waiting for? Buy this book now, and begin your journey to get the women you always wanted!

Why do we think, feel, and act in ways we wished we did not? For decades, New York Times bestselling author Dr. David A Kessler has studied this question with regard to tobacco, food, and drugs. Over the course of these investigations, he identified one underlying mechanism common to a broad range of human suffering. This phenomenon--capture--is the process by which our attention is hijacked and our brains commandeered by forces outside our control. In *Capture*, Dr. Kessler considers some of the most profound questions we face as human beings: What are the origins of mental afflictions, from everyday unhappiness to addiction and depression--and how are they connected? Where does healing and transcendence fit into this realm of emotional experience? Analyzing an array of insights from psychology, medicine, neuroscience, literature, philosophy, and theology, Dr. Kessler deconstructs centuries of thinking, examining the central role of capture in mental illness and questioning traditional labels that have obscured our understanding of it. With a new basis for understanding the phenomenon of capture, he explores the concept through the emotionally resonant stories of both well-known and un-known people caught in its throes. The closer we can come to fully comprehending the nature of capture, Dr. Kessler argues, the better the chance to alleviate its deleterious effects and successfully change our thoughts and behavior. Ultimately, *Capture* offers insight into how we form thoughts and emotions, manage trauma, and heal. For the first time, we can begin to understand the underpinnings of not only mental illness, but also our everyday worries and anxieties. *Capture* is an intimate and critical exploration of the most enduring human mystery of all: the mind.

The brain, with its nearly one hundred billion neurons, is the most complex structure in the universe, and we are living in a period of revolutionary advancements in neuroscience. Yet scientists and skeptics often frame these findings in ways that challenge the Christian worldview. Many professionals and popularizers claim that human beings are their brains, and that all human behavior and experience are merely by-products of brain physiology. In *The Brain, the Mind, and the Person Within*, professor of psychology Mark Cosgrove not only explains what the brain is and what it does but also corrects common misinterpretations and demonstrates that what we know about the brain coheres with the teachings of Scripture. He contends that humans are unities of soul and body in which both the spiritual and the physical interact. From this perspective, he presents informative overviews of contemporary debates about the brain, including consciousness, free will, "God spots," personhood, and life after death. The better we understand the brain, the better we understand ourselves and our exquisite design that reflects the wisdom of the Creator. Thoughtful readers will find this to be a fascinating, accessible survey of this unique part of the body and the profound theological and technological issues surrounding it.

This book contributes to the developing dialogue between cognitive science and social sciences. It focuses on a central issue in both fields, i.e. the nature and the limitations of the rationality of beliefs and action. The development of cognitive science is one of the most important and fascinating intellectual advances of recent decades, and social scientists are paying increasing attention to the findings of this

new branch of science that forces us to consider many classical issues related to epistemology and philosophy of action in a new light. Analysis of the concept of rationality is a leitmotiv in the history of the social sciences and has involved endless disputes. Since it is difficult to give a precise definition of this concept, and there is a lack of agreement about its meaning, it is possible to say that there is a 'mystery of rationality'. What is it to be rational? Is rationality merely instrumental or does it also involve the endorsement of values, i.e. the choice of goals? Should we consider rationality to be a normative principle or a descriptive one? Can rationality be only Cartesian or can it also be argumentative? Is rationality a conscious skill or a partly tacit one? This book, which has been written by an outstanding collection of authors, including both philosophers and social scientists, tries to make a useful contribution to the debates on these problems and shed some light on the mystery of rationality. The target audience primarily comprises researchers and experts in the field.

A guide to AI's thorniest implications that asks: How shall we navigate our brave new world? We are at a monumental turning point in human history. AI is taking intelligence in new directions. The strongest human competitors in chess, go, and Jeopardy! have been beaten by AIs, and AI is getting more sophisticated by the day. Further, AI research is going inside the human brain itself, attempting to augment human minds. It may even create greater-than-human-level intelligence, leading to a new generation of artificial minds—Minds 2.0. Susan Schneider, a philosopher, argues that these undertakings must not be attempted without a richer understanding of the nature of the mind. An insufficient grasp of the underlying philosophical issues could undermine the use of AI and brain enhancement technology, bringing about the demise or suffering of conscious beings. Examining the philosophical questions lying beneath the algorithms, Schneider takes on AI's thorniest implications.

What is this strange mental world that seems so essential to being human? The conscious mind brings together sensations, perceptions, thoughts and memories to generate the seamless movie of a person's life. It makes us aware of the world around us and our own self. How all this emerges from a kilogram of brain cells is one of the greatest unanswered questions. In *Your Conscious Mind* leading brain scientists and *New Scientist* take you on a journey through the mind to discover what consciousness really is, and what we can learn when it goes awry. Find out if we will ever build conscious machines, what animal consciousness can tell us about being human and explore the enigma of free will. ABOUT THE SERIES *New Scientist* Instant Expert books are definitive and accessible entry points to the most important subjects in science; subjects that challenge, attract debate, invite controversy and engage the most enquiring minds. Designed for curious readers who want to know how things work and why, the Instant Expert series explores the topics that really matter and their impact on individuals, society, and the planet, translating the scientific complexities around us into language that's open to everyone, and putting new ideas and discoveries into perspective and context.

Sally Jane Riley is not your typical mild-mannered librarian. Living and working in her hometown of Waxhaw, NC, she challenges the symptoms of her schizoaffective disorder every day in her best attempt at living a normal life. Soon after moving into her new home, she begins to experience dreams and visions of a mysterious turn-of-the-century woman. Sally is caught between a tentative belief in the paranormal and the ongoing symptoms of her mental illness. As the dreams become more intense, they hint of dark happenings that could only lead to the conclusion of foul play. For Sally, the question is a double-edged sword: Do her dreams hold the secret to solving a century-old murder, or is she descending further into the madness of her disease?

Accused of murdering his psychiatrist, a broken man must face his horrific past in order to protect his future George Vandenberg is a drunk with a volatile temper, haunted by the memory of the young woman he once loved and tragically lost. Wrestling with his guilt and pushed by his psychiatrist to confess his role in her death, he teeters on the edge of a nervous breakdown, blacking out drunk more often than not. But when his doctor turns up dead, brutally stabbed to death in his office, George has nowhere left to turn. Stunned and confused, George emerges as the primary suspect in an investigation led by Detective Mike Cancini, a D.C. cop who knows all too well how far a man can go when he's pushed. To prove his innocence, George must face the police, his manipulative wife, and the shell of a man he's become. But as much as George wants to forget his history, the past is not done with him...

Mystery of the Mind A Critical Study of Consciousness and the Human Brain Princeton University Press

'Highly eloquent, fascinating and deeply compassionate' Henry Marsh, author of *Do No Harm* We cannot know how to fix a problem until we understand its causes. But even for some of the most common mental health problems, specialists argue over whether the answers lie in the person's biology, their psychology or their circumstances. As a cognitive neuropsychiatrist, Anthony David brings together many fields of enquiry, from social and cognitive psychology to neurology. The key for each patient might be anything from a traumatic memory to a chemical imbalance, an unhealthy way of thinking or a hidden tumour. Patrick believes he is dead. Jennifer's schizophrenia medication helped with her voices but did it cause Parkinson's? Emma is in a coma – or is she just refusing to respond? Drawing from Professor David's career as a clinician and academic, these fascinating case studies reveal the unique complexity of the human mind, stretching the limits of our understanding.

The book is about mind, structure, mental illness and its treatment. In this book there are 35 chapters with 31 actual case summaries with description of treatment and outcome. This is to alleviate ignorance and stigma on mental ailments in general public. There are chapters on Mind's structure and functions, Examination fear, etc. The confidentiality of the patient is protected. The last chapter helps the reader to self-assess and decide if a person needs Psychiatric intervention. The adage "mental illness is not curable" is a myth. It is curable.

Using her profiling and security skills as a private consultant based in Washington, DC, Dinah uncovers a connection to the shadowy world of neo-eugenics, and those who publicly denounce the killings but privately support a much different view.

Revealing the power of letters, words, and images according to yoga, this book explains how to use this knowledge to strengthen and still the mind.

From the *New York Times* bestselling author of *The Zookeeper's Wife*, an ambitious and enlightening work that combines an artist's eye with a scientist's erudition to illuminate, as never before, the magic and mysteries of the human mind. Long treasured by literary readers for her uncommon ability to bridge the gap between art and science, celebrated scholar-artist Diane Ackerman returns with the book she was born to write. Her dazzling new work, *An Alchemy of Mind*, offers an unprecedented exploration and celebration of the mental fantasia in which we spend our days—and does for the human mind what the bestselling *A Natural History of the Senses* did for the physical senses. Bringing a valuable female perspective to the topic, Diane Ackerman discusses the science of the brain as only she can: with gorgeous, immediate language and imagery that paint an unusually lucid and vibrant picture for the reader. And in addition to explaining memory, thought, emotion, dreams, and language acquisition, she reports on the latest discoveries in neuroscience and addresses controversial subjects like the effects of trauma and male versus female brains. In prose that is not simply accessible but also beautiful and electric, Ackerman distills the hard, objective truths of science in order to yield vivid, heavily anecdotal explanations about a range of existential questions regarding consciousness, human thought, memory, and the nature of identity.

Cousins and best friends, Clara and Stephanie Quinn run *The Raven's Nest* Bookstore, where people go to find their most coveted reads. But they have no idea it's the psychically-gifted Clara who's reading them... The bookstore has made an enemy of the town crier, Ana Jordon, who claims that the store's occult collection is "poisoning" the town's youth. Meanwhile, the store's number-one employee, Molly, has made no secret of her anger over Ana's antics. So when Ana is found dead, killed by the bust of Edgar Allen Poe sculpted by Molly, the evidence is stacked against her. And Clara must rely on her gift to

make sense of this senseless murder...

Neuroscientist V.S. Ramachandran is internationally renowned for uncovering answers to the deep and quirky questions of human nature that few scientists have dared to address. His bold insights about the brain are matched only by the stunning simplicity of his experiments -- using such low-tech tools as cotton swabs, glasses of water and dime-store mirrors. In *Phantoms in the Brain*, Dr. Ramachandran recounts how his work with patients who have bizarre neurological disorders has shed new light on the deep architecture of the brain, and what these findings tell us about who we are, how we construct our body image, why we laugh or become depressed, why we may believe in God, how we make decisions, deceive ourselves and dream, perhaps even why we're so clever at philosophy, music and art. Some of his most notable cases: A woman paralyzed on the left side of her body who believes she is lifting a tray of drinks with both hands offers a unique opportunity to test Freud's theory of denial. A man who insists he is talking with God challenges us to ask: Could we be "wired" for religious experience? A woman who hallucinates cartoon characters illustrates how, in a sense, we are all hallucinating, all the time. Dr. Ramachandran's inspired medical detective work pushes the boundaries of medicine's last great frontier -- the human mind -- yielding new and provocative insights into the "big questions" about consciousness and the self.

A scientist and therapist describes her struggle to communicate with her own son Whitney, a child diagnosed with autism, her intensive search for answers and solutions, and her discovery of the many mysteries of the human brain. 25,000 first printing.

This volume presents a basic overview of the human brain. The brain is the center of the nervous system in all vertebrate, and most invertebrate, animals. In vertebrates, the brain is located in the head, protected by the skull and close to the primary sensory apparatus of vision, hearing, balance, taste, and smell. This work contains a quick look at mankind's knowledge about the human brain throughout history. It also looks at human brain anatomy, the neurons, sensory perception, and the capacity for language, intelligence and creativity, memory, psychiatry, states of consciousness and sleep, as well as other rudimentary examinations of several medical aspects of neurology.

With his signature wisdom and wit, Osho offers his refreshing vision of religiousness, one based on the truth of one's own direct experience of life. In *The Mystery beyond Mind* he infuses new life into the ancient sayings of Patanjali, an Indian sage who systemized Yoga nearly two thousand years ago. Through his responses to individuals' questions, Osho shows that by simply applying new approaches to ordinary, everyday situations, these can become opportunities for awareness and relaxation. This book provides both inspiration and practical, contemporary guidance for seekers everywhere. Osho offers inspiration and practical tools for transformation to seekers worldwide. For more than three decades he spoke about every aspect of the human condition, supporting individuals on their own paths of growth and fulfillment. With humor and compassion, Osho opens new doors with his insights. Celebrating the outer and inner dimensions of life, Osho's approach towards the search is refreshingly healthy and holistic.

"Well-publicized research in psychology tells us that over half of our attempts to change habitual behavior fail within one year. Even without reading the research, most of us will intuitively sense the truth in this, as we have all tried and failed to rid ourselves of one bad habit or another. The human story of habits and the difficulty of change has been told in many books - most of which will make only a quick reference to dopamine or the "lizard brain" before moving on to practical tips and tricks for behavior change. In contrast, *Stuck: The Neuroscience of Why Changing Our Behavior is So Hard* will tell the brain's story about why behavior is so hard to change. Russell Poldrack offers an in-depth, yet entirely accessible, guide to the neuroscientific research on habits and habit change. Part I introduces the "anatomy of a habit," starting with the argument that the resilience of our habits stems largely from a mismatch between the environment in which our brains evolved and the one in which we now live, and continuing on to introduce current work on fear and anxiety, motivation, and cognitive control that bears on habit formation. Part II focuses on what neuroscience can tell us about breaking habits, introducing evidence-based strategies that give us the best possible chance to break cycles of bad behavior. Throughout the book, Poldrack offers a clear-eyed view of what neuroscience can tell us about habit change, and what it cannot - and importantly, how we know what we know"--

In the past fifty years scientists have begun to discover how the human brain functions. In this book Wilder Penfield, whose work has been at the forefront of such research, describes the current state of knowledge about the brain and asks to what extent recent findings explain the action of the mind. He offers the general reader a glimpse of exciting discoveries usually accessible to only a few scientists. He writes: "Throughout my own scientific career I, like other scientists, have struggled to prove that the brain accounts for the mind. But perhaps the time has come when we may profitably consider the evidence as it stands, and ask the question...Can the mind be explained by what is now known about the brain?" The central question, he points out, is whether man's being is determined by his body alone or by mind and body as separate elements. Before suggesting an answer, he gives a fascinating account of his experience as a neurosurgeon and scientist observing the brain in conscious patients. Originally published in 1975. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

NEW YORK TIMES BESTSELLER "If you've ever wondered how you have the capacity to wonder, some fascinating insights await you in these pages." --Adam Grant, New York Times bestselling author of *Originals* As concise and enlightening as *Seven Brief Lessons on Physics* and *Astrophysics for People in a Hurry*, this mind-expanding dive into the mystery of consciousness is an illuminating meditation on the self, free will, and felt experience. What is consciousness? How does it arise? And why does it exist? We take our experience of being in the world for granted. But the very existence of consciousness raises profound questions: Why would any collection of matter in the universe be conscious? How are we able to think about this? And why should we? In this wonderfully accessible book, Annaka Harris guides us through the evolving definitions, philosophies, and scientific findings that probe our limited understanding of consciousness. Where does it reside, and what gives rise to it? Could it be an illusion, or a universal property of all matter? As we try to understand consciousness, we must grapple with how to define it and, in the age of artificial intelligence, who or what might possess it. *Conscious* offers lively and challenging arguments that alter our ideas about consciousness—allowing us to think freely about it for ourselves, if indeed we can.

In Sweden, hundreds of refugee children fall into a state that resembles sleep for months or years at a time. In Le Roy, a town in upstate New York, teenage girls develop involuntary twitches and seizures that spread like a contagion. In the U.S. Embassy in Cuba, employees experience headaches and memory loss after hearing strange noises during the night. These are only a few of the many suspected culture-bound psychosomatic syndromes—specific sets of symptoms that exist in a particular culture or environment—that affect people throughout the world. In *The Sleeping Beauties*, Dr. Suzanne O'Sullivan—an award-winning Irish neurologist—investigates psychosomatic disorders, traveling the world to visit communities suffering from these so-called mystery illnesses. From a derelict post-Soviet mining town in Kazakhstan to the Mosquito Coast of Nicaragua to the heart of the María Mountains in Colombia, O'Sullivan records the remarkable stories of syndromes related to her by people from all walks of life. Riveting and often distressing, these case studies are recounted with compassion and humanity. In examining the complexity of psychogenic illness, O'Sullivan has written a book of both

fascination and serious concern as these syndromes continue to proliferate around the globe.

A bestselling modern classic—both poignant and funny—about a boy with autism who sets out to solve the murder of a neighbor's dog and discovers unexpected truths about himself and the world. Nominated as one of America's best-loved novels by PBS's The Great American Read Christopher John Francis Boone knows all the countries of the world and their capitals and every prime number up to 7,057. He relates well to animals but has no understanding of human emotions. He cannot stand to be touched. And he detests the color yellow. This improbable story of Christopher's quest to investigate the suspicious death of a neighborhood dog makes for one of the most captivating, unusual, and widely heralded novels in recent years.

In Nicci's French's thrilling fifth book, London psychotherapist Frieda Klein herself becomes the prime suspect in a murder A bloated corpse turns up in the Thames, throat slashed, and the only clue is a hospital wristband reading Dr. F. Klein. Frieda is taken to see the body and realizes with horror that it is Sandy, her ex-boyfriend. She's certain that the killer is Dean Reeve—the man who has never stopped haunting her. But the police think he has been dead for years, and Frieda is their number one suspect. With few options, Frieda goes on the run to save herself and try to uncover the truth. Praise for the Frieda Klein Mystery series: "Fierce, fascinating, and full of insight, Frieda Klein is irresistible." —Val McDermid, bestselling author of Splinter the Silence "Sophisticated, gripping, addictive. Crime novels that stand head and shoulders above the competition." —Sophie Hannah, bestselling author of Woman with a Secret "Complex psychological suspense at its best." —Booklist (starred review)

Ready, set, investigate! Welcome to the world of Sleuth & Solve, where clues are in the details and crafty twists put readers' wits to the test. This first book in a new series of mind-bending mini-mysteries encourages readers of all ages to practice deductive reasoning, consider the most subtle details, and always think outside the box. Readers may play alone or with friends, collecting points for cracking each case and determining whose sleuthing skills reign supreme. Read the clues, then lift the flap to reveal the answer to each mystery! This compelling collection of clever, inference-based mysteries makes the perfect gift for puzzle lovers and super-sleuths of every age.

The story of a boy and his father on a car trip through Europe, searching for the boy's mother, who left many years ago to find herself. Structured as a deck of cards -- each chapter is one card in the deck -- The Solitaire Mystery subtly weaves together fantasy and reality, fairy tales and family history.

It has long been one of the most fundamental problems of philosophy, and it is now, John Searle writes, "the most important problem in the biological sciences": What is consciousness? Is my inner awareness of myself something separate from my body? In what began as a series of essays in The New York Review of Books, John Searle evaluates the positions on consciousness of such well-known scientists and philosophers as Francis Crick, Gerald Edelman, Roger Penrose, Daniel Dennett, David Chalmers, and Israel Rosenfield. He challenges claims that the mind works like a computer, and that brain functions can be reproduced by computer programs. With a sharp eye for confusion and contradiction, he points out which avenues of current research are most likely to come up with a biological examination of how conscious states are caused by the brain. Only when we understand how the brain works will we solve the mystery of consciousness, and only then will we begin to understand issues ranging from artificial intelligence to our very nature as human beings.

"The father of cognitive neuroscience" illuminates the past, present, and future of the mind-brain problem How do neurons turn into minds? How does physical "stuff"—atoms, molecules, chemicals, and cells—create the vivid and various worlds inside our heads? The problem of consciousness has gnawed at us for millennia. In the last century there have been massive breakthroughs that have rewritten the science of the brain, and yet the puzzles faced by the ancient Greeks are still present. In The Consciousness Instinct, the neuroscience pioneer Michael S. Gazzaniga puts the latest research in conversation with the history of human thinking about the mind, giving a big-picture view of what science has revealed about consciousness. The idea of the brain as a machine, first proposed centuries ago, has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day. Gazzaniga asserts that this model has it backward—brains make machines, but they cannot be reduced to one. New research suggests the brain is actually a confederation of independent modules working together. Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence, and close the gap between brain and mind. Captivating and accessible, with insights drawn from a lifetime at the forefront of the field, The Consciousness Instinct sets the course for the neuroscience of tomorrow.

The Washington Post bestselling serial-killer thriller that will leave you wondering, is the past really in the past? Three Chicago women have been found strangled, embalmed, and posed as if still alive. Doubting the findings of the local PD's profiler, The FBI calls on forensic psychologist Zoe Bentley to investigate. Zoe quickly gets off on the wrong foot with her new partner, Special Agent Tatum Gray. Zoe's a hunter, intense and focused; Tatum's a smug maverick with little respect for the rules. Together, they must descend into a serial killer's psyche and untangle his twisted fantasies, or more women will die. But when the contents of three inconspicuous envelopes reveal a chilling connection to gruesome murders from Zoe's childhood, suddenly the hunter becomes the hunted.
