

Ottman Sight Singing

The main purpose of the book is to explore basic music theory so thoroughly that the interested student will then be able to easily pick up whatever further theory is wanted. Music history and the physics of sound are included to the extent that they shed light on music theory. The main premise of this course is that a better understanding of where the basics come from will lead to better and faster comprehension of more complex ideas. It also helps to remember, however, that music theory is a bit like grammar. Catherine Schmidt-Hones is a music teacher from Champaign, Illinois and she has been a pioneer in open education since 2004. She is currently a doctoral candidate at the University of Illinois in the Open Online Education program with a focus in Curriculum and Instruction.

Performances of 270 examples of music which illustrate principles of harmony discussed in book.

Music for Sight Singing is structured around organized melodies drawn from the literature of composed music and a wide range of the world's folk music. Real music exercises allow readers to practice sight singing and develop their "mind's ear" -- the ability to imagine how music sounds without first playing it on an instrument. The ninth edition continues to introduce a host of important musical considerations beyond pitch and rhythm- including dynamics, accents, articulations, slurs, repeat signs, and tempo markings. The book's arrangement of simple to complex exercises lays the foundations for success. Learning Goals Upon completing this book, readers will be able to: Fluently read rhythms in simple and compound meters, including those in relatively unusual, irregular, or changing meter signatures. Sight sing melodies in any major or minor key, and in any diatonic mode. Effortlessly read all four common clefs. Understand common musical symbols and terms. Recognize and sing important harmonic features such as dominant seventh and Neapolitan chords. Improvise effectively from a variety of background structures such as a harmonic progression or an underlying contrapuntal framework. Negotiate chromatic passages from simple embellishing tones and tonicizations to modulations to post-tonal music. NOTE: MySearchLab does not come automatically packaged with this text. Conversations with Igor Stravinsky is the first of the celebrated series of conversation books in which Stravinsky, prompted by Robert Craft, reviewed his long and remarkable life. The composer brings the Imperial Russia of his childhood vividly into focus, at the same time scanning what were at the time the brave new horizons of Boulez and Stockhausen with extraordinary acuity. Stravinsky answers searching questions about his musical development and recalls his association with Diaghilev and the Russian Ballet. There are sympathetic and extraordinarily illuminating reminiscences of such composers as Debussy and Ravel ('the only musicians who immediately understood *Le Sacre du Printemps*'), while mischievous squibs are directed at others, most notably perhaps against Richard Strauss, all of whose operas Stravinsky wished 'to admit ... to whichever purgatory punishes triumphant banality'. The conversations are by no means confined to musical subjects, ranging uninhibitedly across all the arts: Stravinsky gives unforgettable sketches of Ibsen, Rodin, Proust, Giacometti, Dylan Thomas and T S Eliot. 'The conversations between Igor Stravinsky and Robert Craft are unique in musical history. The penetration of Craft's questions and the patience and detail of Stravinsky's answers combine to produce an intimate picture of a man who has sometimes puzzled, often delighted, and always intrigued ...' *The Sunday Times*

Designed for the musicianship portion of the freshman theory sequence, Benjamin/Horvit/Nelson MUSIC FOR SIGHT SINGING, Sixth Edition, presents music that is challenging without overwhelming young musicians. Drawing on their extensive experience as composers and arrangers who adapt music for their own students, the authors strike a critical balance between rigor

and accessibility. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Musician's Guide to Theory and Analysis is a complete package of theory and aural skills resources that covers every topic commonly taught in the undergraduate sequence. The package can be mixed and matched for every classroom, and with Norton's new Know It? Show It! online pedagogy, students can watch video tutorials as they read the text, access formative online quizzes, and tackle workbook assignments in print or online. In its third edition, The Musician's Guide retains the same student-friendly prose and emphasis on real music that has made it popular with professors and students alike.

This book is a hands-on investigation of the stages musicians go through as they learn to hear, read, and perform music. It draws on the latest research in music perception and cognition, music theory, and pedagogy, along with centuries of insight from music theorists, composers, and performers. The first part explores the development of music listening skills, including such broader activities as dictation and transcription, and specific abilities such as meter perception, short-term musical memory, and tonic inference. The second part then examines the skills involved in reading and performing music. It looks at such physical skills as vocal production and eye movements and at such complex integrated tasks as sight-singing transpositions and modulations. Throughout the book the author presents these skills in their musical contexts and emphasizes their roles in the general development of musicality. Aural Skills Acquisition builds important bridges between music theory, cognitive psychology, and pedagogy. It subjects ideas from music theory to the rigors of psychological testing and combines findings from the psychology of learning with ideas and methods of contemporary music theory. It will prove an invaluable guide for music teachers, music theorists, and psychologists interested in music perception and cognition.
