While paediatric healthcare professionals view play as the treatment tool of choice for children under school age, the theory and practice underpinning play-based therapeutic approaches often remain less clear to individual practitioners. Paediatric intervention approaches are increasingly being questioned, and individual practitioners constantly asked to provide evidence-based practice. In response, a more coherent understanding and fresh discussion on children's play and utilisation of play for therapeutic purposes is needed, especially as societal expectations and lifestyles change. Play as Therapy provides background theory and practical applications of original research on play assessment and interventions used in therapy. The book offers a solid foundation for identifying and assessing play dysfunction, understanding play in different cultural contexts and considerations when intervening with play. The practical approach is underpinned by theory, research and case vignettes to explain how to utilise play as therapy with challenging children.

Few prospective studies on early detection of autism have found early markers during infancy associated with later diagnosis. The objective of this current study was to examine the relationship between movement and play at 6 months of age and later outcome classification in infants at high and low risk for autism. The study was part of a larger observational cohort (longitudinal) design and employed retrospective double blind video analysis. The TIME Clinical Subtest was used to measure movement maturity and atypical positions, and the Revised Knox Preschool Play Scale (RKPPS) was used to examine the play skills of infants on archived videotapes. Later social and communication behaviors for ASD were determined by outcome diagnostic grouping assigned at 36 months of age by expert clinical researchers. Results suggest that early atypical positions and play skills may be early indicators of developmental disruption in high-risk infants for autism. These findings may provide valuable information about emerging signs of impairment and problematic occupational behavior in ASD which could assist in not only earlier detection but also earlier intervention to improve participation in early childhood occupations.

Researchers, educators, professional organizations, administrators, parents, and policy makers have increased their involvement in the assessment and evaluation of early childhood education programs. This interest has developed swiftly during the last decades. The National Association for the Education of Young Children (NAEYC) and the National Association of Early Childhood Specialists in State Departments of Education (NAECS/SDE) developed a position statement titled, "Early childhood curriculum, assessment, and program evaluation: Building an effective, accountable system in programs for children birth through age 8," to address related trends, issues, guiding principles, and values. Appropriate and well-designed evaluations need to address several audiences including researchers, educators, policy makers, children, and parents. They need to encourage the implementation of a strong foundation that improves the quality of the children's education. Child assessment and program evaluation can lead to effective results and better accountability for preschool, kindergarten, and primary school programs. The purpose of this volume is to share a collection of research strands on contemporary perspectives on research in assessment and evaluation in early childhood education. It provides a review and critical analysis of the literature on assessment and evaluation of programs, children, teachers, and settings. The volume begins with a brief introductory chapter that presents the reader with a map of the area, laying out the issues and alternatives, and linking these to the chapters that follow. It addresses several areas including (1) understanding assessment and evaluation with young children, (2) schools and assessment implications, (3) teacher evaluation and professional development, (4) social relationships and assessment, (5) content areas in early education assessment, (6) technology and assessment, and (7) conclusion with future research directions in assessment and evaluation in early childhood education. The volume is of interest to researchers, educators, policy makers, university faculty, graduate students, and general readers who are interested in research on assessment and evaluation in early childhood education. The chapters are authored by established scholars in the field.
