

System Operations Guide

Server Time Protocol (STP) is a server-wide facility that is implemented in the Licensed Internal Code (LIC) of IBM® zEnterprise EC12 (zEC12), IBM zEnterprise 196 (z196), IBM zEnterprise 114 (z114), IBM System z10®, and IBM System z9®. It provides improved time synchronization in both a sysplex or non-sysplex configuration. This IBM Redbooks® publication will help you configure a Mixed Coordinated Timing Network (CTN) or an STP-only CTN. It is intended for technical support personnel requiring information about: -Installing and configuring a Coordinated Timing Network -Using STP functions and operations -Migrating to a Coordinated Timing Network from various timing environments Readers are expected to be familiar with IBM System z technology and terminology. For planning information, see our companion book, Server Time Protocol Planning Guide, SG24-7280. For information about how to recover your STP environment functionality, see the Server Time Protocol Recovery Guide, SG24-7380.

The International Coal Statistics Data base (ICSD) is a micro- computer based system which contains informations related to international coal trade. This includes coal production, consumption, imports and exports information. The ICSD is a secondary data base, meaning that information contained therein is derived entirely from other primary sources. It uses dBase 3+ and Lotus 1-2-3 to locate, report and display data. The system is used for analysis in preparing the Annual Prospects for World Coal Trade (DOE/EIA-0363) publication. The ICSD system is menu driven, and also permits the user who is familiar with dBase and Lotus operations to leave the menu structure to perform independent queries. Documentation for the ICSD consists of three manuals -- the User's Guide, the Operations Manual and the Program Maintenance Manual. This Operations Manual explains how to install the programs, how to obtain reports on coal trade, what systems requirements apply, and how to update the major data files. It also explains file naming conventions, what each file does, and the programming procedures used to make the system work. The Operations Manual explains how to make the system respond to customized queries. It is organized around the ICSD menu structure and describes what each selection will do. Sample reports and graphs generated from individual menu selection are provided to acquaint the user with the various types of output. 17 figs.

Server Time Protocol (STP) is a server-wide facility that is implemented in the Licensed Internal Code (LIC) of the IBM® zEnterprise Servers (zEC12, z196 and z114), System z10™ Enterprise Class (z10 EC), System z10 Business Class (z10 BC), IBM System z9® Enterprise Class (z9 EC), System z9 Business Class (z9 BC), and zSeries® z990 and z890 servers. It provides improved time synchronization in a sysplex or non-sysplex configuration. This IBM Redbooks® publication is intended for infrastructure architects and system programmers who need to understand the IBM STP functions. Readers are expected to be generally familiar with System z® technology and terminology. This book provides planning information for Server Time Protocol functions and associated software support. For more detailed installation, operation, and recovery information, refer to the companion books Server Time Protocol Implementation Guide, SG24-7281, and Server Time Protocol Recovery Guide, SG24-7380.

With about 200,000 entries, StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations, acronyms, contractions and symbols within astronomy, related space sciences and other related fields. As such, this invaluable reference source (and its companion volume, StarGuides Plus) should be on the reference shelf of every library, organization or individual with any interest in these areas. Besides astronomy and associated space sciences, related fields such as aeronautics, aeronomy, astronautics, atmospheric sciences, chemistry, communications, computer sciences, data processing, education, electronics, engineering, energetics, environment, geodesy, geophysics, information handling, management, mathematics, meteorology, optics, physics, remote

sensing, and so on, are also covered when justified. Terms in common use and/or of general interest have also been included where appropriate.

This manual describes NonStop Cyclone system operations and management activities. It is designed for operators who start up and shut down the Cyclone system or use any of the following: RMI, TMDS, PUP, RCP, ROF, processor dumps, and recovery operations.

Designed for authors of the Security Features User's Guide (SFUG) for a specific trusted system undergoing evaluation as a trusted product. Discusses the intent behind the requirement for a Security Features User's Guide and the relationship to other requirements in Trusted Computer System Evaluation Criteria. Describes the various approaches to writing a SFUG. Extensive bibliography.

Design, deploy, and maintain your own private or public Infrastructure as a Service (IaaS), using the open source OpenStack platform. In this practical guide, experienced developers and OpenStack contributors show you how to build clouds based on reference architectures, as well as how to perform daily administration tasks. Designed for horizontal scalability, OpenStack lets you build a cloud by integrating several technologies. This approach provides flexibility, but knowing which options to use can be bewildering. Once you complete this book, you'll know the right questions to ask while you organize compute, storage, and networking resources. If you already know how to manage multiple Ubuntu machines and maintain MySQL, you're ready to: Set up automated deployment and configuration Design a single-node cloud controller Use metrics to improve scalability Explore compute nodes, network design, and storage Install OpenStack packages Use an example architecture to help simplify decision-making Build a working environment to explore an IaaS cloud Manage users, projects, and quotas Tackle maintenance, debugging, and network troubleshooting Monitor, log, backup, and restore

The Multiple-Station Range Target System (RTS) is a high-fidelity engagement simulator. Using RTS, Short Range Air Defense (SHORAD) and Forward Area Air Defense System (FAADS) crews employ their actual weapons in simulated or live-fire engagement of subscale, fixed-wing and rotary-wing aircraft. RTS permits training and evaluation of individuals, crews, and platoons; provides detailed crew performance scoring and feedback; and can be moved from one location to another and rapidly deployed for a new training exercise or test application. This reference manual describes the Pop-Up Target System (PTS) component of RTS. All relevant operations and maintenance procedures are discussed, and a detailed description of the Pop-Up Target System, PTS power and environmental requirements, necessary test equipment, and important safety considerations is provided. This PTS reference manual is Annex 1 to the separately published Multiple-Station Range Target System Operations Manual. Short Range Air Defense (SHORAD), FAAD, Forward Area Air Defense, Helicopters, Engagement simulation, Subscale aerial target.

Geared towards those deployed to disaster sites as part of the response, this guide offers extensive information on how to make assessments and reports, coordinate with military in the field and participate as a member of a Disaster Assistance Response Team. Original.

Provides the guidelines the FBI uses in their operations, including protection of First Amendment rights, electronic surveillance, and acquisition of foreign

intelligence.

System Operations Manual for Administrators at One World of Wonder(TM) This book provides detailed instruction on the operation and maintenance of the multimedia game Theatre(TM). The purpose of this manual is to instruct employees and administrators of One World of Wonder(TM) and other affiliated organisations how to operate the underlying systems of the software environment. This manual is being made available for instructional purposes only and is not meant for re-production or distribution to the general public. Traverse the magical history of dream worlds. From Avatars to Dungeons. A history lesson in our digital realm.

Server Time Protocol (STP) is a server-wide facility that is implemented in the Licensed Internal Code (LIC) of the IBM® zEnterprise EC12 (zEC12), IBM zEnterprise 196 (z196), IBM zEnterprise 114 (z114), IBM System z10™ Enterprise Class (z10 EC), System z10 Business Class (z10 BC), IBM System z9® Enterprise Class (z9 EC), and System z9 Business Class (z9 BC). It provides improved time synchronization in a sysplex or non-sysplex configuration. This IBM Redbooks® publication will help you plan for and recover from a failure affecting your Mixed or STP-only Coordinated Timing Network. It is intended for technical support personnel requiring information about: - Recovery concepts and definitions - Identifying and taking appropriate actions for recovering from a failed component in a Coordinated Timing Network Readers are expected to be familiar with IBM System z® technology and terminology. For planning information, refer to our companion book, Server Time Protocol Planning Guide, SG24-7280, and for implementation details refer to Server Time Protocol Implementation Guide, SG24-7281..

FOG Version 4.0. 3rd revision. Contains information on general responsibilities for disaster responders, formats and reference material for assessing and reporting on populations at risk, Disaster Assistance Response Team (DART) position descriptions and duty checklists, descriptions of Office of U.S. Foreign Disaster Assistance (OFDA) stockpile commodities, general information related to disaster activities, information on working with the military in the field, and a glossary of acronyms and terms used by OFDA and other organizations with which OFDA works. Ten digit ISBN: 9780160729256. ABOUT THE AUTHOR/AGENCY: USAID is the leading U.S. Federal Government agency that works to end extreme poverty and enable resilient, democratic societies to reach their potential. USAID plays a critical role in our nation's efforts to stabilize countries and build responsive local governments. This document presents concepts for enhancing safety in the operation and management of highways. It presents good design and operational practices for numerous design elements and situations for all types of roads.

This IBM Redbooks publication discusses z/VM and Linux operations from the perspective of the z/OS programmer or system programmer. Although other books have been written about many of these topics, this book gives enough information about each topic to describe z/VM and Linux on IBM System z operations to somebody who is new to both environments. This book is intended for z/OS programmers and system programmers who are transitioning to the z/VM and Linux on System z environments and who want a translation guide for assistance. We base this book on our experiences using System z10 Enterprise Edition, z/VM version 5.3 RSU 0701, and Novell SUSE Linux Enterprise Server (SLES) 10 on System z.

Providing crucial information to first responders since 1983, Firescope is proud to present the interactive 2017 Field Operations Guide ICS 420-1. All the information from the 2017 FOG ICS 420-1 is included in this eBook. Now you can easily find critical information on Resource Typing, Position Checklists, Organization Charts and examples of how to organize using the Incident Command System (ICS) when facing All-Hazard Incidents. New to this version of the 2017 FIRESCOPE Field Operations Guide is a section on Fire in the Wildland Urban Interface (WUI) with information on Structure Triage, Structure Protection Guidelines, Actions and Tactics. Easily access other valuable information such as Wildland Fire Management Guiding Principles, Tactical Engagement, Levels of Engagement, Powerline Safety and a Structure Assessment Checklist. Also included is valuable information on these ICS topics: Common Responsibilities, Multi-Agency Coordination System (MACS), Area Command, Complex, Command, Unified Command, Planning Process, Operations, Planning, Logistics, Finance/Administration, Organizational Guides, Resource Types and Minimum Standards, Hazardous Materials, Multi-Casualty, Urban Search and Rescue, Terrorism/Weapons of Mass Destruction, Swiftwater/Flood Search and Rescue, High Rise Structure Fire Incident, Protective Action Guidelines, Firefighter Incident Safety and Accountability Guidelines, Glossary of Terms, Communications, California Agency Designators, and Operational Area Identifiers.

This IBM® Redbooks® publication provides operations teams with architectural design patterns and guidelines for the day-to-day challenges that they face when managing their IBM Business Process Manager (BPM) infrastructure. Today, IBM BPM L2 and L3 Support and SWAT teams are constantly advising customers how to deal with the following common challenges: Deployment options (on-premises, patterns, cloud, and so on) Administration DevOps Automation Performance monitoring and tuning Infrastructure management Scalability High Availability and Data Recovery Federation This publication enables customers to become self-sufficient, promote consistency and accelerate IBM BPM Support engagements. This IBM Redbooks publication is targeted toward technical
